Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p>	<p>The study has significant relevance for the health area, as it is a rare case. Thus, some considerations were made, separated by section, for a better understanding and enrichment of the work.</p> <p>The study has significant relevance for the health area, as it is a rare case. Thus, some considerations were made, separated by section, for a better understanding and enrichment of the work.</p> <p>Abstract</p> <p>Keywords must be registered in Mesh terms to facilitate the location of the article in the search platform. According to Mesh terms, the word subacute appendicitis is not included in this register, I suggest reviewing the term and the term bilateral cannot be a keyword because in Mesh terms it is not associated with varicocele, I suggest removing it. The purpose of the study is missing.</p> <p>Introduction</p> <p>I suggest placing the definition and classification information from the Discussion in this Introduction section. All information on both pathologies should be here in this section. I suggest defining bilateral varicocele and its characteristics.</p> <p>Regarding subacute appendicitis, as already suggested, this term should be revised and references that justify the use of this term included. What characterizes subacute appendicitis?</p> <p>The last sentence should be in the Case Presentation section.</p> <p>The purpose of the study is missing.</p> <p>Case Presentation</p> <p>I suggest putting approval for research by signing the consent form.</p> <p>Discussion</p> <p>In this section, all data referring to the results and reports, as well as the form of treatment, should be discussed based on the citation of other studies on the subject. As this is a rare case, the results must be discussed according to each pathology. For example, the histopathological results and classification of varicocele.</p> <p>All the conceptual part and classification must be in the introduction.</p> <p>I suggest citing studies on bilateral varicocele because it is rarer.</p>	
<p>Minor REVISION comments</p>	<p>Regarding subacute appendicitis, as already suggested, this term should be revised and references that justify the use of this term included. What characterizes subacute appendicitis?</p>	

Review Form 1.6

Optional/General comments	In this section, all data referring to the results and reports, as well as the form of treatment, should be discussed based on the citation of other studies on the subject. As this is a rare case, the results must be discussed according to each pathology. For example, the histopathological results and classification of varicocele. All the conceptual part and classification must be in the introduction. I suggest citing studies on bilateral varicocele because it is rarer.
