Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	This case study is innovative. The causes of acute appendicitis are obstructive and catarrhal. Faecolith, foreign bodies are usual causes of acute obstructive appendicitis. Obstruction due to worms is rare, but it is there. This study is evidence. The author has probably, correctly stated the pathogenesis in this case study, is due to obstruction or hypersensitivity reaction. I agree with the obstruction as the cause of pathogenesis because, the clinical features and raised white blood cell counts are in accordance with obstructive pathology.	
Minor REVISION comments	There are minor grammatical errors, rest everything is alright.	
Optional/General comments	The author has mentioned three case reports. This is significant. Most of the surgeons despite doing thousands of appendicectomies, obstruction due to worms is not found. I congratulate the author.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
