PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none"> • The author needs to improve Figure 1 about the map of the sampling location. Makea representative map • The author needs to improve the appearance of Figures 2 – 25. Change them to images grouped by location so that they are representative and in accordance with the statistical calculation table which states that each location has a sample size of 12. • In the method section, fish taken from the study site were purchased from fishermen. How does the author convince the reader that the fish taken are in accordance with the distribution of sampling locations • Lots of inconsistencies in the writing format. Authors should follow the writing systematics provided by the journal • In the background section, the authors need to add the importance of these two species in the study area, whether as an economic fish or as something else. The author should also add to the importance of studies on the Okashi river. Is it other than Okashi to be a fishing area for these fish or what? • In the objective section, it is stated that the K parameter and the length-weight relationship are used as indicators of health to environmental status. The author should add the environmental conditions at least the water quality of the sampling location 	
Minor REVISION comments	Authors can use proof reading services to improve the quality of the English used in accordance with the recommendations of journals or other credible proof services	
Optional/General comments
