PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Overall presentation of the paper is of good and new research in terms of technique used for propagation. Environment control is little explained. Control of the applied technique in terms of root propagation and leaf counts is little explained. Describe the arrangements with full disclosure of placements of stubs and root part etc. under methods and material. Describe polyhouse conditions and environment to build confidence in your data. If any plastic culture used, if yes please give brief discussion about that also.	
Minor REVISION comments	Statistics and use of two-way ANNOVA is awesome. Please bring in the box and whisker plots to show the difference between two approaches i.e. branch length and branch diameter.	
Optional/General comments	Very satisfying research. They will be encouraged for better results and production for field trial.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
