PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<i>The authors stated that the typhoid fever infection is more common in women than in male based in their results and this is not correct because the sample size does not contain equal number of men cases and women cases, so they need to resize their sample again, equalize the number of the men and women cases and then see if it is truly that typhoid infection is more common in female than male or not.</i>	
Minor REVISION comments	<i>The authors should turn their results into graphs to be easy for comparison. The authors should make comparison between their results and other results in other local hospital in their country to show if the prevalence level in their hospital is more than normal or not.</i>	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
