Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none">• This manuscript contains a summary. This study was conducted to assess that the COVID -19 pandemic has disrupted normal vaccination programs, causing delays in the administration of various vaccines at various ages, perhaps leading to the emergence of vaccine-preventable illnesses. As a result, it is critical to intervene as soon as possible to prevent such outbursts among youngsters. The impact of COVID-19 on general health care delivery systems are huge including immunization services, the several measures were taken by most of the government all over the world to prevent the spread of infection such as lockdown, wearing a mask and social distancing. The people have suffered a lot during the pandemic, not only due to the burden of disease but have also faced difficulties in other domains of life. One of the important concerns is the interruption of routine immunization services. The consequences of interrupted immunization services may be life-threatening, as chances of outbreaks of vaccine-preventable diseases (VPD) in susceptible children could be high.• The Manuscript's general arrangement is well-organized and balanced. The article is written clearly and correctly and with the minimum length necessary for all relevant information.• The title is adequate for the content, informative, concise, and clear.• Abstract is comprehensive, concise, includes the most interesting and essential material, and it briefly describes the aim of the work, techniques and methods used, major findings with important data and conclusions.• Keywords are 5 keywords were provided immediately following the abstract.• Introduction provides a factual background, clearly defined problem, a brief literature survey and the scope and justification of the work done. Recent literature on the subject is summarized.• Material and methods give adequate information to allow the experiment to be reproduced and are clearly described in a concise manner.• The tables are understandably positioned inside the text.• Results are clearly described in a concise manner.• Discussion provides detailed interpretation of data. The citations are given in support of the findings.• Conclusions state the major findings of the study.• Authors declare that ethical approval and informed consent from the participants were approved by ethical review committee.
