

Review Form 1.6

Journal Name:	Asian Journal of Research and Reviews in Physics
Manuscript Number:	Ms_AJR2P_83959
Title of the Manuscript:	Important Atmospheric Parameters over a Indian Tropical Station using Various Remote Sensing Instruments and a Model
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalajr2p.com/index.php/AJR2P/editorial-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	With the data presented in table 2 the affirmation on the end of page 7: "Both gradient and logarithmic gradient methods show near equal ABLH magnitudes". can not be done, results are too much different. The double gradient method seems to be more compatible to other both.	
Minor REVISION comments	There are a series of grammatical problems in the text. In the figures the right margin and the bottom part are missing, some misalignment in them. In the figure four it is necessary to explain what the variation of colours means, is necessary for the reader to understand the meaning of the paper.. Citation 25 is typed wrong.	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
