PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The document is very interesting and presents relevant information for the region. In addition, the results are of great importance for these ecosystems or plant communities that are evaluated. However, the different sections of the document need to be united coherently (they are indicated in the attached file), but once the comments have been addressed, the document is considered suitable for publication.	
Minor REVISION comments	The authors should not lose sight of the fact that all the results are based on statistical or mathematical processes, therefore, I do not suggest that an extensive explanation of the methods used be made, if not, that they be included and duly justified. For example, is the normality of the information fulfilled to use the ANOVA? What happens if, when analyzing this assumption, it suggests using a non-parametric test?. They must present these details so that there is no subsequent questioning of their work.	
Optional/General comments	Once the comments have been addressed by me as a reviewer, it's fine.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
