

## Review Form 1.6

Journal Name:	<a href="#">Asian Journal of Research in Biochemistry</a>
Manuscript Number:	Ms_AJRB_81960
Title of the Manuscript:	The Role of Inhibitors in Ascertaining the Type of Isoenzyme of Alkaline Phosphatase (ALP) and its Clinical Correlations
Type of the Article	Original Research Article

### General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://journalajrb.com/index.php/AJRB/editorial-policy> )

### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<ol style="list-style-type: none"> <li>1. Could you describe the eligibility of subjects recruited in your manuscript? Since ALP level is too different in each population</li> <li>2. Could you discriminate whether age significantly affects ALP level, since your participants' age range from 19-85 years old?</li> <li>3. Since it is a diagnostic test accuracy, would you mind showing the ROC curve and AUC value for each disease?</li> <li>4. Do you have any suggestion whether the application of Ascertaining the Type of Isoenzyme of Alkaline Phosphatase could replace golden standard for detection of each diseases you have mentioned in your manuscript?</li> </ol>	
<b>Minor</b> REVISION comments	In my humble opinion, data from Table 5 is better to be provided in the graphic or chart with certain statistical analysis comparing both values.	
<b>Optional/General</b> comments	This is an interesting study that analysed various isoenzyme of ALP. This study seems to have pivotal role in the further research of diagnostic of bone disorders such as Paget Disease, hyperparathyroidism, chronic infection etc.
