### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>It is a good review paper and can be progressed well to benefit researchers in the field. Indeed, it is a good effort from you.</p> <p>Perhaps, as a review paper, the expectation is always to be broadly covered with much clearer representations, e.g. matrix, infographics, etc. Please include them to show the demand and gap of the application.</p>	
<b>Minor</b> REVISION comments	<p>The conclusion should reflect a very clear gap of the subject matter, e.g. functional capability vs. field of applications associating with its own parameters. This will provide a better avenue for the reader of whether or not the ANN/BPNN can suit his/her research work.</p>	
<b>Optional/General</b> comments	<p>Good to have a look on highly ranked papers on how a review paper is architect before coming-up with a very gross paper, especially covering subject matter that has been widely used in most of the fields.</p>
