(<https://www.journalsaorj.com/index.php/AORJ/editorial-policy>)

### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	The finding revealed the most common type of invasive ductel carcinoma (NOS) similar to others tropical haplogroups and the original American populations. This can be correlated to life style and nutrition of the population which be Westernized	
<b>Minor</b> REVISION comments	The methodology followed is appropriate for finding the nature of ER, PR,HER2 and Ki168 T receptor in the breast cancer cells of patients. This would help to assess the population's genetics frequency of expression of receptors and to assess the progress of cancer.	
<b>Optional/General</b> comments	Since breast cancer is driven by hormone receptors their positivity in Ghana population is a good finding for encourage adjuvant endocrine therapy alongside chemotherapy. Attribute and mention about Ghana haplogroups of popualtion	

### PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
