

Review Form 1.6

Journal Name:	Asian Research Journal of Mathematics
Manuscript Number:	Ms_ARJOM_72746
Title of the Manuscript:	Generalized Estimators for Finite Population Variance Using Measurable and Affordable Auxiliary Character
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://peerreviewcentral.com/page/manuscript-withdrawal-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>This paper has numerous typographical errors. The whole of variances in the introduction omit the square terms for example.</p> <p>The author also expands equation (30) before this equation appears. For such a technical paper with so much notation, these errors makes the reviewer cautious of other errors throughout.</p> <p>The level of math is relatively elementary – for a math journal.</p>	
Minor REVISION comments	The author claims his results improve previous results but gives no metrics to establish this. There is no explanation of why even try an exponential estimator without any proof.	
Optional/General comments	Poorly written with little explanations. Just one equation after another. This paper needs a serious proof-reading.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
