PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none"> In the title there is mention of BAP only but in the MS 2,4-D has also been tried. The title needs to be rephrased. In the table-2 'ns' and '**' should be used as superscript at all places. Same goes for the table-3 and other tables..... The results need to be written in past tense. Correct in the abstract and result section. Moreover, The English of the MS can be further improved. No details of callus being embryogenic is provided in the MS. In fact, the word embryo is missing completely from the results, which is quite questionable as per the title of the MS. The resolution of the figures provided should be better with proper labels wherever required. The plagiarism of the MS is very high (41%). Especially many sentences in the discussion part has been copied from various sources, which is unacceptable. Overall, the MS needs major revision especially the results section with reference to the embryogenic callus and the plagiarism. 	
Minor REVISION comments		
Optional/General comments
