### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	The authors should correct the tables and the statistical evaluation subsection. It is not clear whether one or two-factor ANOVA has been applied from the written in Material and methods. Later below one table they explain two-factor ANOVA. The tables however are complicated and it is the effect of the factors (additives and storage) is not understandable, as well as their interaction. Furthermore the multiple comparisons ( post-hoc) are not visible. The authors should consult with other references as to how to present the tables with two factors ANOVA.	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments
