PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	A statistical test (t-test) is not necessary before knowing that 5,000 kg/ha is different from 320.3 kg/ha. The task should be to investigate why this use level is very low comparing to what is recommended by research. The recommendations formulated are not sustained by a scientific investigation on the factors affecting the use levels of organic manure by the farmers. An econometric analysis would be useful for that.	
Minor REVISION comments	-	
Optional/General comments	-	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
