PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	<p>The paper is very interesting, since it addresses one of the issues that most concerns humanity, and to which the scientific world is putting a lot of effort into solving or understanding climate change. Some suggestions I give could improve the document:</p> <ul style="list-style-type: none"> • In introduction it would be interesting to expand a little more the study objectives • In methodology, the Kriging method should be developed since it is the basis for preparing interpolations and maps that visualize changes in rainfall and evapotranspiration patterns. • In results, Figure 3 should be improved in addition to making a good discussion of it and its possible comparison with other works. • Figure 2 should contain the coordinates in UTM, which would greatly improve this Figure. • Finally, the conclusions must be broadened since, according to the results and discussions, there is a lot of information that can be used. 	
Optional/General comments
