	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	This research analyzed the impact of rainfall variability on the flow of the Kara River in the Kozah district. The study of the year to year and monthly variability of the hydro-climatic regime over the period 1955-2015 shows that the study area is under the influence of water deficits. The calculation of the monthly flow coefficients made it possible to define the different periods of change in flow during the year; It appears that the beginning of the decline in water in the Kara River begins in October, which marks the end of the rains in this area. The highest levels were recorded between January and June. The period from July to October corresponds to the period of intense rains, so high water in this river.	
<b>Minor</b> REVISION comments	There are some spelling, phrasing and comprehensive table formulation are needed.	
<b>Optional/General</b> comments	This article can potentially be accepted with <b>MINOR revision</b> .
