### **PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	The article meets all the requirements for scientific work, scientifically robust and technically sound too. The topic is topical and well discussed in the introduction chapter, but there is no clear aim of the study. The material and method section describes the field experiment accurately and completely. The problem is whether one-year data can be accepted as reliable. Results and discussion are presented in a scientific style and accessible to the reader. My recommendation to the author / authors is to present the cited tables in the text, where necessary.	
<b>Minor</b> REVISION comments	The abstract does not indicate the years of the study	
<b>Optional/General</b> comments	The researcher (s) touched on a topical issue in agronomy. I believe that the research of the researcher / researchers will contribute to a better understanding and improvement of the technology for growth baby corn. The results obtained may be the basis for more in-depth research in the future.
