<b>Compulsory</b> REVISION comments		
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments	The results of this study revealed that there is a substantial association between natural soil variables and micronutrient cation bioavailability and distribution. There is a link between soil variables and micronutrient cation bioavailability. Due to changes in soil pH and organic carbon, the availability of micronutrients is considerably reduced. This work is well-written and builds on a strong core idea. The writers were successful in answering the study issue by using interesting subtopics. Previous references adequately supported their results and interpretations, so I could accept the manuscript in its current state.
