

## Review Form 1.6

Journal Name:	<a href="#">International Journal of Plant &amp; Soil Science</a>
Manuscript Number:	Ms_IJPSS_80872
Title of the Manuscript:	Effectiveness of aqueous, alcoholic extracts and fertilizing of Jatropha curcas leaves in the control of blossom end rot of fruit in tomato
Type of the Article	Original Research Article

### **General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalijpss.com/index.php/IJPSS/editorial-policy> )

### **PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>Material and methods: in table 1 there are two treatments that are not mentioned in the text (folical and codamin); these two treatments need to be described like the others.</p> <p>Item 3 is just RESULTS.</p> <p>Check if the text of the results is coherent with the statistic represented in the graphs (figures).</p> <p>In the DISCUSSION item, the repetition of results should be avoided. It might be better to include the discussion right after the description of each result.</p> <p>The discussion is too long; it is interesting to be more direct in relation to the justifications for the results obtained.</p>	
<b>Minor</b> REVISION comments	<p>Item 3 is just RESULTS.</p> <p>It is not necessary to put "treatment" before T1, T2 etc; because the T already stands for treatment.</p> <p>Insert the figure right after describing the result.</p>	
<b>Optional/General</b> comments	<p>The present study aimed to evaluate the effect of aqueous and alcoholic extracts and fertilization with the powder of Jatropha curcas leaves in the fight against flower rot in tomatoes, a disease that has been causing damage to farmers who work with the fruit. This is a very relevant study.</p>	

Review Form 1.6

**PART 2:**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Are there ethical issues in this manuscript?</b>	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
