Manuscript Number:	Ms_IJR2H_76559
Title of the Manuscript:	Evaluation of Antinuclear Antibodies and Differential Leucocyte Count in ABO Typed Women with Spontaneous Abortion in Yenagoa, Bayelsa State
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://peerreviewcentral.com/page/manuscript-withdrawal-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>1-I would suggest that the document be presented in abstract , introduction, methodology, interpretation of results, discussion, conclusion ... because by mixing interpretation and discussion of the results, there is a bit of disorder and confusion.</p> <p>2-The methodology used does not really allow drawing the same conclusions as the author because no correlation test has been done.</p> <p>3-perhaps it would have been better to join the spouses in this study to be able to justify the results and interpretation of table 5.</p>	
Minor REVISION comments	<p>1-some tables have not been interpreted let alone discussed. Remove tables that are useless.</p> <p>2-present the results in the order in which the tables are listed.</p> <p>3-give the reference that justifies the prevalence p used to calculate the sample size.</p>	
Optional/General comments	<p>Use more recent references to discuss the results.this work needs to undergo some modifications to be able to have a better publication impact. It is a little superficial knowing the multitude reasons that can lead to miscarriages.</p>
