PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The manuscript has a very relevant theme for maternal and child health. However, it needs adjustments to better understand the object of study.</p> <p>1) The Introduction does not present the problem clearly. What is the purpose of the study? It is suggested to review reference 1, as it is very old and does not support the argument.</p> <p>2) Method is very simplified. It would be valid to describe the location/scenario of the study, how the data were obtained and how the data analyzes were carried out. It is unnecessary to present the formula used, but it could detail other aspects of the analysis: which software was used?</p> <p>3) Results and discussion could be separated. Figure 1 is not clear on all labels. There is discussion about COVID-19, but this was not mentioned at any time before in the text.</p> <p>4) The conclusions present data that were not presented in the results. There are parts of the text written in another language.</p>	
Minor REVISION comments		
Optional/General comments
