PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The author had some good results but more work is needed. I have rewritten the English in this article and they can use that copy and build on it if they like.	
Minor REVISION comments	Two many terms were defined that were not needed like microbiology and the recipes for the agar, it is only important to list agar recipes if you altered one, not necessary if you used another persons' recipe.	
Optional/General comments	The Discussion was logical and it has a good message but the paper needs an overhaul before publishing. Please include control information for instance for the plates did you open an empty plate to test the air in the lab as some of the microbes may be from your lab and not the vegetables. Thus, you may want to do a control like that now, to show if any of the microbes are living in your lab. I think it has potential to be a good article but it should be rewritten and added too.
