

## Review Form 1.6

Journal Name:	<a href="#">Journal of Advances in Microbiology</a>
Manuscript Number:	Ms_JAMB_78102
Title of the Manuscript:	DETERMINATION OF ANTI-PSEUDOMONAL ACTIVITIES OF COCOA (Theobroma Cacao) POD HUSK USING TIME-KILL-TEST AND AGAR-WELL DIFFUSION TECHNIQUES
Type of the Article	Original Research Article

### **General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

**Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>The manuscript entitled “<b>DETERMINATION OF ANTI-PSEUDOMONAL ACTIVITIES OF COCOA (Theobroma Cacao) POD HUSK USING TIME-KILL-TEST AND AGAR-WELL DIFFUSION TECHNIQUES</b>” is highly relevant for publication in Journal of Advances in Medical and Pharmaceutical Sciences, due to the importance of the topic addressed. However, for the publication of the manuscript, it is essential to revise it, in order for it to improve. Thus, below are suggestions and comments:</p> <p>1 - The abstract of the manuscript is partially presented in the structures requested in “Guideline for Authors”. The abstract must contain the following sections: Aims, Presentation of Case, Discussion and Conclusion. Therefore, it is necessary for authors to correct the sections presented in the abstract. In addition, in order to reduce the size of the manuscript, authors are asked to present the abstract section followed by a colon and the text, as shown in the example taken from the guide for authors:  “Aims: Here clearly write the aims of this study. Sample: To correlate platelet count, splenic index (SI), platelet count/spleen diameter ratio and portal-systemic venous collaterals with the presence of esophageal varices in advanced liver disease to validate other screening parameters.”</p> <p>2 - It is suggested that the authors number the sections for a better presentation of the manuscript, starting with the INTRODUCTION with section 1, as well as the other sections presented (MATERIALS AND METHODS, DISCUSSION...). Regarding the REFERENCES section, it is requested that it be written in capital letters as it was done for the other previous sections.</p> <p>3 - About the image that demonstrates plate 1, the authors are asked to change part of the title. Instead of Plate1 being written Fig.2, since the image presented by the authors is primarily classified as a figure.</p>	
<b>Minor</b> REVISION comments	<p>1 - The “Authors' Contribution” section is highly encouraged. Therefore, it would be appropriate for authors to add this section to the end of the manuscript. As per the guide for authors, the following wording can be used: “Author A' designed the study, performed the statistical analysis, wrote the protocol, and wrote the first draft of the manuscript. 'Author B' and 'Author C' managed the study analyses. 'Author C' managed the bibliographic searches... All authors read and approved the final manuscript.”</p>	
<b>Optional/General</b> comments
