PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ol style="list-style-type: none"> 1. Please revise the title of the article, adding the type of the study (it is a randomized trial) 2. Abstract. About the sentence "Study group (group S) received infusion of a mixture of dexmedetomidine, ketamine and lidocaine.", please indicate dosages. 3. Abstract. Indicate method used for evaluating the intraoperative consumption of isoflurane as well as for the efficacy of opioid sparing effect (it is one among the main goal of the study) 4. Introduction. "However, there may be an association between increased postoperative analgesic consumption and the continuous usage or the administration of large doses". Please explain better this point as it is confusing. 5. "PONV and postoperative pain are still frequent after laparoscopic gynecological surgery despite the use of multimodal analgesia, which are composed of non-steroidal anti-inflammatory drugs, dexamethasone, opioids, and local anesthetics." Add a reference 6. Offer more details in discussion and expand limitations (consider that the sample size should not be a limitation as it has to be calculated a priori). 	
Minor REVISION comments	<p>In the sentence: (such as postoperative nausea and vomiting (PONV), ileus, urinary retention and over sedation)s the brackets are not necessary</p> <p>Explain the acronym ENT</p> <p>Correct several typos alongside the paper</p>	
Optional/General comments
