

## Review Form 1.6

Journal Name:	<a href="#">Journal of Advances in Medicine and Medical Research</a>
Manuscript Number:	Ms_JAMMR_85915
Title of the Manuscript:	The Effect of Endometrial Scratching before Embryo Transfer in Woman with History of Implantation Failure in Previous Intracytoplasmic Sperm Injection Cycle; Clinical and Biological Study
Type of the Article	Original Research Article

### **General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journaljammr.com/index.php/JAMMR/editorial-policy> )

**Review Form 1.6**

**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<ol style="list-style-type: none"> <li>Quantity and quality of transferred embryos in comparison in group A and group B - The quantity and quality of transferred embryos is very important for achieving pregnancy</li> <li>An explanation is needed as to how group B was selected.</li> </ol> <p>“Abstract sequence: All patients were subjected ... serum Natural killer cells CD56 measure .. but in Patient and Methods: group A (before endometrial scratching, peripheral blood sample was taken for the measurement of level of the natural killer cells CD56) and a control group B.”</p>	
<b>Minor</b> REVISION comments	<ol style="list-style-type: none"> <li>In the Abstract it is written : to evaluate the effect of endometrial scratching before fresh or frozen embryo transfer on clinical pregnancy rate In the section Patients and Methods only embryo transfer is mentioned. Were there any frozen ET? It would be good to show a comparison of fresh and frozen embryo transfers between groups A and B.</li> <li>It would be good to show : Implantation rate and Ongoing Pregnancy rate...</li> </ol>	
<b>Optional/General</b> comments	I read the text with great pleasure and attention. This is an interesting topic for research. The article is original and has good scientific quality. The conclusions are strong and applicable to the reproductive field. Although the main idea is clear to the reader, the organization of the MS should be improved in order to be considered for publication in an international journal.	

**PART 2:**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
