PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Inclusion and exclusion criteria are not not clearly specified. Statistical analysis doesn't take into account many confounding variables such as concomitant diseases, concomitant medications, age, sex, BMI. A descriptive analysis of the subjects involved is missing; reader cannot know anything about study population. This deficiency may lead to inappropriate conclusion.	
Minor REVISION comments	First two paragraphs of introduction are lacking in bibliography; please insert additional references. One limitation of the study is the retrospective design: it could be fair to expose this in the conclusion.	
Optional/General comments	In this paper, reader doesn't know anything about patients involved, only they suffered of COVID-19. This is a great limitation in the interpretation of the study. Adding descriptive analysis and clinical details on patients could be useful.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
