Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The current study examines the Frequency of symptoms of COVID-19 disease among the people of Bangladesh. This topic is not timely as much is already known regarding COVID-19. Below are my suggestions for authors</p> <ol style="list-style-type: none">1) The abstract is poorly written. The authors did not mention the sample size.2) Introduction is too short for a research article. Much is already known about this disease, so should the authors mention why they want to carry out this study?3) Methods section is short, and the authors did not mention the sample size. "Here, all persons who were found positive RT-PCR for COVID-19 from July 2021 to January 2022 were included in this study."4) Similarly, results are presented briefly, and the authors should adequately discuss current clinical challenges, including diagnostic and therapeutic management and risk stratification in this patient population.5) The language may be effectively executed; nonetheless, there are various errors and phrases that need proper referencing to the literature.6) This article does not match the standards for the research article; thus, it must be thoroughly revised or re-written.	
Minor REVISION comments		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
