Review Form 1.6

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|---|--|
| Compulsory REVISION comments | <p>This is a good and interesting study and it is recommended for publication. However, the following comments should be addressed (please, also refer to comments in the manuscript).</p> <p>Abstract: Abstract should be written under the following headings: Background, methods, results and conclusion</p> <p>Introduction: The rationale and usefulness of this study needs to be elaborated upon. There have been similar studies conducted in other parts of Nigeria, what usefulness does this study add? It is important to clearly elaborate on this. Include gaps from previous studies that informed your study or the specific nature of the study setting that supports the uniqueness of the present study.</p> <p>Methodology: The formular for sample size estimation is not clear. You should indicate sample size estimation for your total population. i.e 159. And then explain that convenience sampling was used to recruit XX doctors and XX medical students from the different departments. Also, you should include an estimate of your response rate.</p> <ul style="list-style-type: none"> - There should be information on whether the questionnaire was adapted from a previous study or newly developed. - There must be mention of reliability and validity of questionnaire used in this study - It will be very beneficial to conduct a statistical test for factors associated with practices and barriers to compliance <p>Results</p> <ul style="list-style-type: none"> - Include frequencies and percentages e.g. 57.4% (n=XX) across all paragraphs of the results section - In considering statistical analysis for association, it will be good to summarize sociodemographic characteristics for both doctors and medical students while also indicating frequency and % of doctors and students in the table. <p>Discussion: The discussion can be improved on. Please refer to the comments in the manuscript</p> <p>Conclusion.</p> <p>No need including percentages here.</p> <p>The conclusion should highlight practical implications of the study with clear recommendations given. Also, possibly state areas for further study/research</p> <p>Also, there is need to state the strengths and limitations of this study</p> <p>References: Please refer to comments in the manuscript</p> <p>Grammar: This manuscript will also benefit from an editorial service to improve on the grammar while retaining its contexts.</p> | |

Review Form 1.6

| | | |
|----------------------------------|--|--|
| | | |
| Optional/General comments | Generally, there was an opportunity to explore other factors responsible for poor practices and usage of PPEs e.g availability of these PPEs in the first place. If these PPEs are available and not in-use, this would have improved on the discussion and possible responsible reasons/factors for findings in this present study. If data on this is available, please include. | |

PART 2:

| | | |
|---|--|---|
| | Reviewer's comment | Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i> |
| Are there ethical issues in this manuscript? | <i>(If yes, Kindly please write down the ethical issues here in details)</i> | |
