Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Dear authors</p> <p>I appreciate the fact that the article contains varied and current literature. I recommend that each working hypothesis to be supported by a sequence of Literature Review. You should insist on detailing the "perception" variable. I recommend the following bibliographic sources: https://venturewell.org/wp-content/uploads/EMAR-v1.pdf https://doi.org/10.1186/s40497-018-0107-5</p> <p>It is good to define precisely the research problem and research question (s). In order to draw a conclusion about the data in Table 3 containing the Likert 1-5 scale, a weighted arithmetic mean can be calculated to know the opinion of the majority and report it on this scale.</p> <p>Several correlations can be made between the independent and the dependent variables in order to have a clear conclusion. You should set the dependent variable and the independent variables To see a working model of the variables analysis and correlation you could researched: https://doi.org/10.3390/admsci10040096.</p> <p>The t test is not suitable for use in this situation when it is desired to highlight the existence of the link and the type of link between the variables. This test compares two averages when the standard deviations are equal. This is not the case here. In order to see various ways of analysing the factors on which the "entrepreneurial mind-set" depends, but also ways of analysing, I recommend you to consult / cite the following scientific articles: https://ssrn.com/abstract=3109171 https://files.eric.ed.gov/fulltext/EJ1199672.pdf</p> <p>I recommend improving the discussion area and the conclusions and recommendations section. To insist on the managerial implications, but also on a personal, educational level.</p> <p>Kind regards</p>
