

Review Form 1.6

Journal Name:	Journal of Geography, Environment and Earth Science International
Manuscript Number:	Ms_JGEESI_82704
Title of the Manuscript:	New Explanation for the Near-Side/Far-Side Lunar Maria Disparity
Type of the Article	Short communication

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

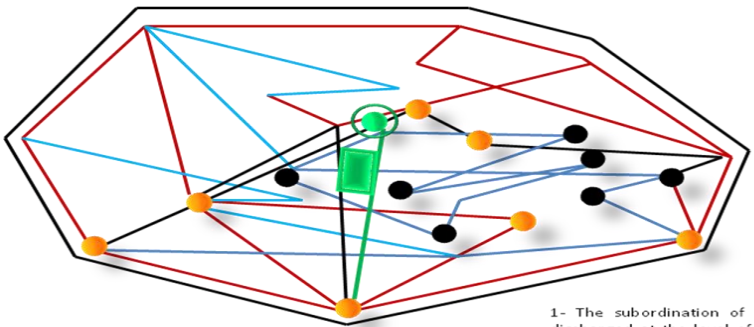

(<https://www.journaljgeesi.com/index.php/JGEESI/editorial-policy>)

Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, corrects the manuscript and highlights that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ol style="list-style-type: none">1- Oxygen has never been an obstructive agent for the formation of any planet georeactor.2- Why the planets' conception has to, always be a volcanism or big bang phenomena.3- In each mass we can, only talk about an energetic fission georeactor.4- An energetic georeactor has no heat degree and so ever because the energy compensated in a fission georeactor planet can be identified only with the total of energy features which is composed of to activate the planets' movement.5- Massive floods are the results of an energy deficiency transmission which is related EARTH – SUN.6- The magnetic field in the galaxy is not related or produced by any planet in the galaxy to another, for info : it is a separate network system well traced all over the solar system to maintain the balance and the alimentation of different energies which are attracted by each planet of space mass in movement in the galaxy.7- The Sun evacuates energies based on very sophisticated molecule composition and are diverged regularly on a very specified circuit that protects the masses around the sun from any deficiency.8- The georeactor of the moon produces and activates Simultaneous wave's resistance to localized hydraulic pressure at the level of the centering zone thus maintaining the gravity of the moon. formula: $(H+2ClO^2)$.	

Review Form 1.6

<p>Minor REVISION comments</p>	<p>I would like the writer to look at the Moon as a whole mass to be able to explain the sides and to base his explanation on specified information in order to approach the main subject which is the Moon Structure and geometry. I am providing him the following schema which is my own property to guide him.</p> <div style="text-align: center;"> <p>The Moon</p>  </div> <div style="margin-left: 20px;"> <ul style="list-style-type: none"> ● Energie Biologique ● Energie Atomique ● Energie Chimique ● Energie Nucléaire ● Zone Centrage ● Oxygène ● Hydrogène </div> <div style="margin-left: 20px;"> <p>1- The subordination of the electromagnetic field discharged at the level of the environment depends on the field of attraction of UV rays at the level of the HARAS zone. Absence of positive transaction waves, the central point points to the determining axis of the exact Formula of the rotation cycle of the solar system around the Galaxy.</p> </div>	
<p>Optional/General comments</p>		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i> Just information must be reviewed by the author, in order to present logic and trustfull scientific details and calculations</p>
