### **PART 1: Review Comments**

|                                     | <b>Reviewer's comment</b>  | <b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|--|--|
| <b>Compulsory</b> REVISION comments | The name of the manuscript refers to the clinical manifestations COVID-19 on different age categories. From my point of view, for the quality of the review, the information is quite brief and very generally presented. The focus of information is very little on clinical issues. Although a citation for gastrointestinal damage appears in the bibliography, it is only mentioned in passing in the manuscript. In the bibliography there are papers with different topics from the topic of this article, to the detriment of some with useful information. The information is disseminated and difficult to track often. A schematization of data by age categories, on affected organic systems and complications that occur in people with comorbidities would be welcome. The English translation should be revised for the message to reach the reader. Unfortunately, I did not find out more information than from the regular written or spoken press. From my point of view, in order to be accepted, it must be reviewed in all chapters and completed in order to be able to explain the title of this manuscript. |  |
