PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>This is well developed manuscript that meets the old question of how do we stop the hypotension from Propofol. Although I enjoy the brevity of the article, there needs to be more clear concise wording of what each Group received. When did group P get the saline, and if group E did not get saline, just ephedrine and the timing of it. Please clean up the methodology section.</p> <p>This article would be good. It just needs to be cleaned up and explained more.</p>	
Minor REVISION comments	Lots of grammatical errors with wording.	
Optional/General comments	There is a general sense that this needs more clarification of what the study methods were, the actual results and the conclusions.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
