PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ol style="list-style-type: none"> 1. The objective is very broad – not addressing the mental health issue 2. Revise the statistical analysis – chi-square is used to compare the relationship between two categorical values. It is inappropriate to use the word correlation 3. Reporting of pie charts and bar chart- The legends need to be clear in the charts. It is unnecessary to repeat the colours and its representations in the captions accompanying the charts 4. I will appreciate use of tables to present the mental health issues by gender 	
Minor REVISION comments	<p>It is recommended to mention how the questionnaire was created (is it based on previous studies?)</p> <p>Was the questionnaire validated?</p>	
Optional/General comments	<p>In some parts, there appears to be a small amount of awkwardness in the use of the English language and some sentences are missing words or are a bit broken. I would recommend that the authors get the assistance of a colleagues highly familiar with the use of English for clinical and scientific presentations to review the manuscript so that it will be easier to read</p>
