### **PART 1:** Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	There is no clear objective stated behind the study. The author has not mentioned the serum levels of TSH and glucose at the time of symptoms and diagnostic investigations. The conclusion of this paper is vague. Discussion is all haphazard with lots of spelling mistakes and does not justify the theme of the manuscript. Major revision of the paper as a whole is advised. I will review it again after the corrections.	
<b>Minor</b> REVISION comments	Primary infertility should be associated with hypothyroidism and diabetes. If no association is proved, only then it should be stated that primary infertility can be multifactorial. Please justify your statement.	
<b>Optional/General</b> comments	The grammar should be corrected and same tense should be used throughout the script. Author has varied the tense between past and present which is confusing. Overall, the pharmaceutical part of this case report has been emphasized less upon which is the main scope of this journal.	

### **PART 2:**
