PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The paper talks about a relevant theme. Nevertheless, the number and conclusions presented were already published and reviewed, even in the 2020 Jerusalem consent revision. The usage of clinical scores is already recommended in intermediated-risk patient to identify patients who needed imaging. Furthermore, the inconclusive ultrasonography is also a criterion to performing a CT. A data which could be explored is the area under the ROC curve of the association between US and clinical criteria. This could exclude the need of CT performing in intermediated-risk patient.	
Minor REVISION comments	Lack of scientific English language.	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
