### **PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments		
<b>Minor</b> REVISION comments	<p>The COVID-19 pandemic is having a significant impact on general surgical procedures. In this sense, I would like to state that I find the results of your study valuable.</p> <p>Since COVID is essentially an abbreviation, it should be written in capital letters throughout the article, not as Covid.</p> <p>There is no need to specify the age ranges of the patients included in the study twice in the abstract.</p> <p>It is sufficient to include the time period in which the study was carried out in the Materials and Methods, and it is unnecessary to specify it in the Introduction section.</p> <p>In the Results section, it would be more appropriate if the median age of 40 patients aged between 17 and 59 were given together with IQR values instead of the mean age.</p> <p>Tables (especially Table 1.5) should be standardized according to certain rules. All headings should be given above the tables and only the first letters should be capitalized.</p>	
<b>Optional/General</b> comments	<p>The COVID-19 pandemic is having a significant impact on general surgical procedures. In this sense, I would like to state that I find the results of the study valuable.</p>
