<b>Compulsory</b> REVISION comments	<p>The aim of the study was to investigate the prevalence of contraceptive use among couples and to assess factors associated with contraceptive use. Rapid population growth is one of the main problems in developing countries. Fertility management allows couples to achieve pregnancy only when desired. Therefore, knowing the level of knowledge about contraceptive methods becomes essential. Which highlights the importance of the study.</p> <p>Overall, the introduction is good and well written, the material and methods are appropriate, the results are adequate, as are the discussion and conclusion. However, before recommending you for publication, I suggest that some adjustments be made.</p>	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments
