Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	<p>Introduction:</p> <p>Comment: Please explain the purpose of the 5 points mentioned in your introduction. I did not understand the key points you wanted to express and the relationship between these points and femoral neck fracture? You focus on femoral neck fractures in the elderly why do you also mention younger patients in the second sentence? And what is your research purpose? Please be clear.</p>	
<u>Minor</u> REVISION comments	<p>Abstract:</p> <p>Comment: The first half of this paper briefly describes the shortcomings of the current medical treatment of femoral neck fracture, and the choice of treatment should be based on personalized treatment strategy. I didn't understand why I didn't go into the topic of personalized treatment strategies, but went back to the definition of femoral neck. This requires further explanation and revision.</p> <p>Comment: for management, the patient profile is explained. The whole rehabilitation intervention process is designed below, but the results of the patient's rehabilitation plan are not explained. Please supplement the patient's recovery status. Is there post-operative/post-convalescent follow-up, recovery of ADL capacity, and retaking of x-rays compared to prior results? You can supplement the X-ray if necessary.</p> <p>Discussion: It is suggested that the importance of rehabilitation training be added in the first paragraph to facilitate the introduction of the second paragraph.</p>	
<u>Optional/General</u> comments
