### **PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>Patient data: height, weight, BMI, not menopausal at age 60? Blood pressure and pulse            What type of Echinococcus is under discussion in our patient's case: multilocularis, granulosus, vogeli, oligarthus...postoperative results.            I understood that the patient underwent biopsy curettage, but what was the preoperative histopathological result (before hysterectomy)?            The radiological appearance of the hemorrhagic uterus? What was the indication for a hysterectomy?            Complete histopathological result of the spleen, cyst, uterus, ovaries and fallopian tubes</p>	
<b>Minor</b> REVISION comments	<ol style="list-style-type: none"> <li>1. eosinophil 02%, macrophage 03%...I should change a single digit percentage</li> <li>2. Post operatively, the patient had an uneventful recovery and was discharged on the post-operative day fourteen. In our case, patient received pneumococcal, meningococcal and influenza vaccine post operatively after 2 weeks before discharge...when she was vaccinated? I doubt it was on the day of the intervention due to the common post-vaccine reactions</li> <li>3. Histological examination of the cystic membrane...images...</li> <li>4. How was the parasite inactivated during the intervention, or was it not done?</li> <li>5. Also during the discussions, the other ways of resolving splenic hydatid cysts (from splenectomy, either through open or laparoscopic approaches, to organ-sparing surgery including partial splenectomy, cyst enucleation, or partial pericystectomy, PAIR) must be pointed out.</li> <li>6. Complete postoperative treatment including injectable anticoagulant, antibiotic ...</li> </ol>	
<b>Optional/General</b> comments	The article needs major revisions and adjustments
