Decrease size of introduction. Pathophysiology of thalassaemia is known to all, no need to discuss more.            General condition is poor- does not signify much, details should be provided. GCS score should be provided. Details of CNS examination needed.            Did the frequency of blood transfusion increase in the patient following chinese virus infection, as shown in the pathophysiologic mechanism?            Why is LONG COVID syndrome written in capitals?            Did he develop any neurological symptom during the active covid infection? If yes, what was that? If no, then this encephalopathy is a new onset symptom. Why is it a prolonged covid manifestation?            ACE 2 receptors allow the entry of the chinese virus within all the cells. What is their role in neurodegeneration in particular?</p>
