PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Introduction contains only very elementary information. Authors write about BMI but they did not pay attention that BMI is not ideal parameter. They did not mention other anthropometric parameters such as WHR. In the introduction there is no information about heterogeneity of population with obesity (metabolically healthy and metabolically unhealthy). There is very small amount of information about the study population: there is no information about basic biochemical parameters, there is no information about the main cause of hospitalization, Information in the table 1. is contrary to information in the text. "Twenty five percent (25%) of the population are male while Twenty five percent (25%) of the population are females" – so what is the gender of 50% of participants? Discussion is very short and very poor.</p>	
Minor REVISION comments		
Optional/General comments	<p>In conclusion, in my opinion this text is of very low scientific quality and it absolutely should not be published in a scientific journal.</p>	

Review Form 1.6

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
