

Review Form 1.6

Journal Name:	Journal of Pharmaceutical Research International
Manuscript Number:	Ms_JPRI_77703
Title of the Manuscript:	Analytical Method Development and Validation For Simultaneous Estimation of Amlodipine Besylate and Indapamide by using UV VIS Spectrophotometer and RPHPLC in bulk and dosage form
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The brief literature review should have been included in the manuscript.</p> <p>2. The structure of Amlodipine besylate mentioned in the manuscript is not complete. Being a salt, the benzene sulphonic acid part needs to be incorporated and thus, the molecular formula needs to be changed as $C_{26}H_{31}ClN_2O_8S$.</p> <p>3. Page no 3 & 11: In preparation of standard stock solution for Indapamide & Amlodipine, the concentration of solution II is needs to be changed to 100 μg/ml instead of 10 μg/ml.</p> <p>4. Analysis of tablets for Indapamide: Dose should have been mentioned.</p> <p>5. If the linearity for both the drugs by UV spectrophotometry is carried out on 5-50 μg/ml, then rational for precision carried on 50 μg/ml and accuracy on 5 μg/ml be explained.</p> <p>6. The linearity range for both by UV spectrophotometry can be increased above 50 μg/ml as the absorbances for Indapamide at 50 μg/ml is 0.5787 and Amlodipine is 0.6100 μg/ml respectively.</p> <p>7. The UV spectra must be included in the manuscript instead of UV plot.</p> <p>8. Integration of HPLC chromatograms need to be done.</p> <p>9. Tables 16 and 26: Stand drug concentration added at three levels need to be reverified.</p> <p>10. Referencing needs to be updated.</p>	
Minor REVISION comments		
Optional/General comments
