### **PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	no	
<b>Minor</b> REVISION comments	no	
<b>Optional/General</b> comments	Empasis should be on stopping of bottle feeding that is clearly mentioned in this review article. But in conclusion , cases where beast feeding not available due to hormonal changes in mother especially after caessarian , the spoon feeding and drinking of warm water after milk is important for prevention of ECC. Also cleaning of primary teeth as soon as they erupt in the oral cavity with soft silicon brush or muslin cloth should be mentioned.	

### **PART 2:**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
