PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The protocol is such an important study focusing on knowledge on COVID-19 prevention among pregnant women. The findings of this study will add important public health information regarding COVID-19 preventive measures during this unique period of pregnancy.</p> <p>However, the following observations have been made:</p> <ol style="list-style-type: none">The protocol lacks scientific and technical knowledge. The introduction has no in-text citations for factual information.The methodology is just a list of items without scientific explanation. In some instance, the author wrote as if the study was already done. Furthermore, under expected outcomes, the authors made reference to "primigravida moms in labour" as the focus of the study. This gives an impression that the author did 'cut and paste' without critically editing the text. <p>It is recommended that the who manuscript should be revised and edited by an English language expert before re-submission.</p>	
Minor REVISION comments		
Optional/General comments
