<b>Compulsory</b> REVISION comments	<b>The aim of this study was to assess the safety of weekly Primaquine in G6PD deficient children for the radical treatment of Plasmodium Vivax Malaria. The authors showed that Primaquine 0.75 mg//Kg/week for total eight weeks was highly effective for the radical cure of Plasmodium Vivax in G6PD deficient children and there was no recurrence of Plasmodium Vivax after 8 weeks of therapy. They concluded that this regimen was safe as there was no hemolysis demonstrated in children and it might be appropriate for poor countries where G6PD testing is unavailable.</b>
