PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	It is a good research work. Although the sample is relatively small, the results are interesting and for a population where these types of problems abound, such as India or Latin America, these findings are important because they help us to make medicine faster and more effective.	
Minor REVISION comments	How do you explain the significant difference between the male and female population? Is it biological or is it cultural? What is the cost of the study panel for these three tests for a patient with suspected acute bacterial meningitis?	
Optional/General comments	I think it is an interesting and well-supported work.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
