Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ol style="list-style-type: none"> 1. On your objectives: for both objective 1 & 2 the word "assess" is a vague term and it would be good if you change with "determine"; To determine the perceived image of nursing among nursing students and to identify factors influencing for perceived image of nursing. 2. How can you measure perception level? I think it is difficult to level perception rather we can determine perception as positive or negative. 3. Objective 3 & 4 are not really objective and they can be addressed by the 2nd objective if you accept the 1st comment. 4. Regarding your variables: - I think your dependent variable is perceived image of nursing not the influencing factors and your independent variables in other term influencing factors are socio-demographic characteristics. 5. On the tool: please describe the tool in detail (section II); the number of questions it has, how it is rated, the minimum and maximum summation values expected, whether it is adopted/adapted/developed. 6. On the result part (section I); it would be great if you write it in a (text) statement form rather than listing in number. 7. On section B result: it said that "..... % of nursing students were strongly disagree/disagree/agree....." but to what they agree/disagree it is not entirely clear. 8. On section C result: said that "It proves that as perceived image of nursing increases their influencing factors are decreases" but what are those influencing factors? what do you mean influencing factors? It is not a single factor rather a term that describes a group of factors affecting perception. 	
Minor REVISION comments	<ol style="list-style-type: none"> 1. Some of your introduction statements doesn't have any references (paragraph 4 & 5); the same is true on the background (1st & 2nd) and need of the study (1st & 2nd). 2. Reference number 9 doesn't have a year of study/publication. 3. On discussion part; you have intext citation for reference 39 & 40 but you only have 15 references. 	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
