PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The research article is well design. But it is too short for the publication. It should be at least 3000- 3500 words. If the research paper is fulfilling the journal criteria, then it is ok.</p> <p>The author should include the magnitude of corona cases and death cases according to country wise or state wises. If the paper is cover at a global level, then it should go country wise. Then it will give more clarity about the subject.</p> <p>For any research data is more important. Without data there is no validity of the research. There are thousands of research papers has already published on corona virus. So the data can easily available.</p> <p>This study conducted on Datta Meghe Medical College and Shalinitai Meghe Hospital and Research Center, Nagpur in collaboration with ABVRH and JNMC (Datta Meghe Institute of Medical Sciences Deemed to be University), Sawangi, Wardha, Maharashtra.</p> <p>The author is conducted research in Maharashtra which was one of the most affected state due to COVID-19. But in the paper there is no data which indicate the magnitude of the COVID cases and death cases in Maharashtra. It would be better if the author can add some data which is missing in the paper. If we see the icmr data which shows that in Maharashtra more than 40 percent of the covid victims who have lost their lives due to virus.</p>	
Minor REVISION comments	Minor revision	
Optional/General comments
