PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The discussion defiant of attraction as that present in the titel. Those with red marker is better cancel	
Minor REVISION comments	<p>Review comments</p> <p>1- All Paragraves with red colour cancel</p> <p>2- The researcher used Chi-square test but in fact I did not find it</p> <p>3- Table 1 , the age of selected patient is between 18 into 40 years. This is must be divided ento groups to fined the most common age is susceptible for reeclapmptic</p> <p>4-Table 1 section 5,6 better to cancels because its supposed all patients from Sodden government</p> <p>Discussion</p> <p>5-Among the patients admitted with gestational hypertensive disorders 75% developed preeclampsia; 14.4% developed eclapmptic; The recovery from eclampsia is high and it's a good points must be discussed and mentioned the clinical care used</p> <p>6- while 91% has shown non-syndromic complications; 47.8% showed symptoms and 52.2% were asymptomatic (why)</p> <p>7- (86.4%) were in age category of 18- 40 years. (A wide range) Must be discuss the susceptible age</p> <p>8-expressing of maternal and paternal genomes in the same place contributes to the stimulation of maternal immunity.</p> <p>Autoimmune diseases is excluded in selection patients eg. SLE . the possibility in decreasing calcium could be nutritional requiring for pregnancy</p> <p>9- Lastly TORSH if estimated can give the ansure of the high insedance of preeclampsia</p>	
Optional/General comments
